Remote Control Range

REMOTE CONTROL RANGE

Servocontrols are control devices for the remote control of variable displacement pumps (hydrostatic transmissions) and flow rate directional control valves. The precise and adequate use of all types of applications is ensured by high sensitivity, numerous adjustament curves and a low operating force.

The remote control range Hydrocontrol is part of a consolidated tradition of development and production with innovative spirit of design in production processes. This permits offering a complete range of controls able to cater for the many different needs of end users.

The cast-iron body together with the top quality of the steels used and most suitable heat treatments make this new range of hydraulic controls a forerunner in terms of sturdiness, reliability, ergonomics and smooth control.

HYDRAULIC REMOTE CONTROL

Hydraulic remote controls that Hydrocontrol work by means of direct pressure reducing valve. They are especially sitable for remote-controlling distributors, pumps and motors, in small space thus ensuring high performances, quick and reliable responses both on mobile machinery and on industrial equipment. Hydrocontrol range includes different hydraulic remote controls that are manufactured using proper material whose processing is carried out with technology methods, the most sophisticated tests and inspections, thus assuring a product at high reliability, suitable for strictest and exacting works.

FOOT PEDAL

The wide range of foot controls, available in a variety of configurations, allows the best choice of product to be made in both functional and dimensional terms. The different models offer several solutions when it comes to hydraulic connection layout – always guaranteeing simple, straightforward installation. The new HC-RCS and HC-RCT series also include different foot control types, with special care applied to their ergonomic and design features.

HYDRAULIC REMOTE CONTROL AND FOOT PEDAL OPERATING PRINCIPLE

Hydraulic remote controls and foot pedals works according to the principle of direct-acting pressure reducing valves. In rest position, the Joystick lever or kit pedal is held in neutral by return spring; inlet port P is closed and ports are connected to tank port T. By selecting control lever, plunger compresses return spring and reaction spring through cam mechanism; consequently it shifts spool and opens connection holes between inlet port P and service ports. This causes a pressure increase on service ports that is proportional to the control lever stroke and the reaction spring.

SUPPLY UNIT

Supply unit range is used when oil is needed at a pressure that is lower than the pressure of primary circuit and without installing an auxiliary pump. It has been manufactured in order to feed hydraulic remote control or to adjust other equipment such as pumps and motors. It works by means of direct pressure reducing valves and it is usually provided with an accumulator in order to ensure, at any time, a certain number of moves even if the primary circuit is in a condition of emergency of failure: it is olso used to increase the switching efficiency. In order to avoid the accumulator depletion, the circuit that works at low pressure is protected by an adjustable main relief valve connected in the supply unit and by a check valve.

Because of the small dimensions and working on the same adjusting screw, this valve has the possibility of setting both the pressure reducing valve and the main relief valve. Main relief valve pressure setting is higher than about 10 bar if compared to the pressure reducing valve - see the pressure setting diagram. Supply unit may be installed in any mounting position but the accumulator should be as far as possible from heat sources.

SUPPLY UNIT OPERATING PRINCIPLE

The purpose of supply unit HC-SU and HC-SE is to fit hydraulic remote controls in an hydraulic system working at high pressure with reduced flow at a low pressure. Operating principle is that of a direct acting pressure reducing valve. High pressure fluid from the main circuit is routed through ports P1, P2 and P3: pressure is decreased to the value required for supplying the hydraulic controls by means of a pressure reducing valve that directs the necessary fluid to the control via port (U). Supply units are fitted with an accumulator that satisfies short term peak power demands and is a source of emergency power should the main relief valve inside the cartridge of the pressure reducing valve and by the check valve. To start the hydraulic system, a backpressure of at least 10 bar on service port (P) has to be applied when the accumulator is discharged.

HC-RCX - 2 axis single lever remote control

Technical specifications

Max pressure: 100 bar Oil capacity: 12 l/min Weight: 2,5 Kg

Applications

Mini-excavators, Mini steer loaders, Backhoe loaders, Wheel loaders, Tractors, Boom mowers

Hydraulic remote control HC-RCX belongs to wide range of Hydrocontrol'e Remote Control; the lever's anti-swaying system and the ergonomic handle provides great sensitivity while manoeuvring and makes his use very comfortable for the operator. Low operating efforts, low energy consumption and low maintenance make these hydraulic remote controls HC-RCX ideal for piloting remote control directional valves, variable displacement pumps and motors, auxiliary valves, frictions and hydraulic brakes.

Body arrangement

The remote hydraulic HC-RCX body has two versions: standard body and body with shuttle valve for translation.

The set-up for translation applications (code: RB) includes a flanged plate with internal shuttle valves allowing a single service port control to be split between two ports. In this way, action on the lever will generate two separate pressure signals, allowing dedicated machine translation devices to be controlled.

As an alternative to the "RB01" version, other set-ups are available with different flow restrictor diameters and configurations on the service ports; for more information contact our Commercial Dept.

HC-RCY - 2 axis single lever remote control reduced operating force

Technical specifications

Max pressure: **100 bar** Oil capacity: **12 l/min** Weight: **2,5 Kg**

Applications

Mini-excavators, Mini steer loaders, Backhoe loaders, Wheel loaders, Tractors, Boom mowers

The new HC-RCY hydraulic remote control is an evolution of the HC-RCX model. It adds to the variety of options and solutions offered by HC-RCX with an upgraded hydraulic control system, allowing the operating comfort to be improved; the reduced-diameter control spool allows the required operating effort to be reduced by approximately 30%, without affecting the control, hysteresis and accuracy characteristics of this device.

HC-RCL

RCL - 2 axis single lever remote control with electromagnetic detent

Technical specifications

Max pressure: **40 bar** Oil capacity: **12 l/min** Weight: **2,9 Kg**

Applications

Wheel loaders Skid steer loader

HC-RCL is a remote control specifically designed for Wheel Loaders application. Based on the design of HC-RCX, it is used for two axis control (typically boom and bucket). It includes the function of electromagnetic detent to hold the lever at the end of the stroke: this feature is requested on loaders to allow the operator to start driving while boom and bucket functions are still moving.

Electromagnetic detent technical specification

Supply voltage Resistance at 20°C Power at 20°C Duty rating Coil insulation plass (IEC 85) Connector Connector protection (EN 60529) 12 Vdc +/-20% 22Ω 7W ED100% H Deutsch DT04-6P IP67 24 Vdc +/-20% 94Ω

A 6-pole Deutsch DT04-6P connector is always used notwithstanding the number of required electromagnetic detents. The drawing here below shows the wiring of the solenoids assembled on the service ports 2, 3 and 4. The Deutsch DT06-6S connector counterpart can be supplied on request by quoting the order code 487200906.

HC-RCL3

RCL3 - 2 axis lever + sisgle axis lever remote control with electromagnetic detent

Applications Wheel loaders

HC-RCL3 is a remote control specifically designed for Wheel Loaders application. The compact design combines in a single body the two axis control (for boom and bucket) with a third axis (for auxiliary function). Electromagnetic detent is available on all ports. A security electrovalve to activate the remote control is available on request.

Electromagnetic detent technical specification

Supply voltage Resistance at 20°C Power at 20°C Duty rating Coil insulation plass (IEC 85) Connector Connector protection (EN 60529) 12 Vdc +/-20% 22Ω 7W ED100% H Deutsch DT04-6P IP67 24 Vdc +/-20% 94Ω

The Deutsch DT06-6S connector counterpart can be supplied on request by quoting the order code 487200906.

Options

The single-axis remote control is available without any detents, with electromagnetic detent or with mechanical detent.

HC-RCM Stackable single axis levers remote control

Technical specifications

Working section number: 1 - 12 Max pressure: 60 bar Oil capacity: 12 l/min Weight HC-RCM/1: 1,5 Kg Tie rod clamping torque: 14 Nm

Applications

Mini steer loaders, Backhoe loaders, Tractors

Hydraulic remote control HC-RCM belongs to the wide range of Hydrocontrol products. Low operating efforts, low energy consumption and low maintenance make these hydraulic remote controls HC-RCM ideal for piloting remote control directional valves, variable displacement pumps and motors, auxiliary valves, frictions and hydraulic brakes. Each hydraulic remote control is assembled with N.2 tie rod kits which include a tie rod, two nuts and two washers. It can be assemble up to 12 working sections.

HC-RCM

HC-RCB Single axis levers two modules remote control

Technical specifications

Working section number: 2 Max pressure: 60 bar Oil capacity: 12 l/min Weight: 3,2 Kg Tie rod clamping torque: 14 Nm

Mini skid loaders, Backhoe loaders, Tractors

Hydraulic remote control HC-RCB belongs to the wide range of Hydrocontrol. Low operating efforts, low energy consumption and low maintenance makes these hydraulic remote controls HC-RCB ideals for piloting remote control directional valves, variable displacement pumps and motors, auxiliary valves, frictions and hydraulic brakes. Each hydraulic remote control is assembled with N.2 tie rod kits including a tie rod, two nuts and two washers.

Dimensions

Ø 125

Body with shuttle valve arrangement

Bodies are available equipped with integrated shuttle valves to generate additional signals. The RA11 configuration includes a fifth port activated when any one of the four service ports is actuated (for safety, alert or brake release functions).

HC-RCV hydraulic remote control one service port

Technical specifications

Max pressure: **100 bar** Oil capacity: **12 l/min** Weight: **1 Kg**

Applications

Forklifts, Tractors

HC-RCV is a general purpose single user remote control. It can be delivered with simple spring centering control, 360° regulating handle holding the control position or with pedal control. In rest position, the hydraulic remote control is held in neutral by return spring; inlet port P is closed and ports are connected to tank port T. By selecting control, plunger compresses return spring and reaction spring; consequently it shifts spool and opens connection holes between inlet port P and service ports. This causes a pressure increase on service ports that is proportional to the control stroke and the reaction spring.

V06		51788 294	Hydropneumatic accumulator with rubber membrane Volume of nitrogen: It. 1,50 Precharge: 10 bar		

Accumulators technical specifications						
Max. working Working pressure temperature		Max. allowed pressure ratio	Accumulator precharge pressure			
210 bar	-20°C +80°C	< 6/1	10 bar			

Setting diagram, reducing valve, relief valve

Because of the small dimensions and working on the same adjusting screw, this valve has the possibility of setting both the pressure reducing valve and the main relief valve. Main relief valve pressure setting is higher than about 10 bar if compared to the pressure reducing valve - see the pressure setting diagram. Supply unit may be installed in any mounting position but the accumulator should be as far as possible from heat sources.

Dump valve technical specifications

Operating voltage Resistance at 20°C Power at 20°C Utilization factor Class wrapping (IEC 85) Connector Connector protection (EN 60529) 12 Vdc +/-20% 7 Ω 20,5 W ED100% H DIN 43650/ISO4400 IP65 24 Vdc +/-20% 28 Ω

Metering curve classification

All the Hydrocontrol servo control configurations imply the choice of a "metering curve" kit; the number of metering curves changes according to the number of product service ports. The metering curve classification depends on the working pressure (measured in bars) and stroke length (measured in mm).

The sketch here below shows a typical metering curve and the list of available curves.

For information on the complete list of curves, contact the manufacturer's Commercial department.

Metering curve classification for foot pedal HC-RCS e HC-RCT

The HC-RCS and HC-RCT tilting foot controls imply the use of limited-stroke dedicated curves guaranteeing improved control ergonomics.

Metering curves are available equipped with a swing-preventing dampening device; for more informations contact our Commercial Dept.

Prefeeling - Mechanical detent

The prefeeling function enables users to safely lock the lever adjustment without accidentally reaching the point of detent. When choosing from the metering curves shown, the reduced adjustment stroke should be taken into consideration, and a curve should be chosen allowing the required pressure value to be reached at the prefeeling stage.

The HC-RCX and HC-RCY hydraulic remote controls have a prefeeling setting at 5.7 mm along the stroke in combination with the mechanical detent (code 02).

The HC-RCX, HC-RCY prefeeling effect on the A01 curve is shown by way of example.

Similarly, the HC-RCM and HC-RCB hydraulic remote controls have a prefeeling setting at 6.9 mm along the stroke in combination with the mechanical detents (codes 02, 03 and 04).

The HC-RCM, HC-RCB prefeeling effect on the A01 curve is shown by way of example.

Prefeeling - Electromagnetic detent

The HC-RCL and HC-RCL3 hydraulic remote controls are designed with prefeeling before the electromagnetic detent point is reached. In this case, the prefeeling is set at 7.5 mm along the stroke.

The HC-RCL, HC-RCL3 prefeeling effect on the A01 curve is shown by way of example.

Return spring classification

For all the servo control configurations designed by Hydrocontrol, in each service port and on the relevant metering curve, a return spring must be selected.

The exploded view here below shows the example configuration of a 4 service port remote control; as you can see, a return spring is pictured at each metering curve. 4 types of return spring are currently available (see table).

CODE	PRELOAD	END STROKE LOAD
МА	25 N	48 N
МВ	14 N	27 N
мс	73 N	135 N
MD	89 N	169 N

Return spring classification for HC-RCS e HC-RCT

The range of RCS and RCT tilting foot controls only includes the MD type return spring. The relative values are shown here below.

CODE	PRELOAD	END STROKE LOAD
MD	94 N	149 N

Handles classification

All the hydraulic remote controls manufactured by Hydrocontrol can be set up to have different handles according to the system dimensions and applications. All the handles in the range are shown here below; for each handle, the corresponding operation is also pictured. The choice of a handle will also influence the choice of a lever kit.

Handles "A - B - C - D"

The handle families identified with A, B, C and D have been designed to equip the vast range of earth-moving machines including mini-excavators, mini-loaders, brush cutters, backhoe loaders, tractors, etc.

These handles can be set up to have – or not – a microswitch.

The hydraulic remote controls most suitable for fitting these handles are HC-RCX, HC-RCY and HC-RCM.

Handles microswitch breaking B - C - D

MICROSWITCH SPECIFICATIONS

HC-SADR2 Silent Alerter Driver Handle "F" with vibration

HC-SADR2 with vibration (silent alarm) is an ergonomic handle which, via a 'dead man' control, can transmit different frequency vibrations to the operator's hand. The handle can be equipped with up to three microswitches in its front side, while the rear side is always equipped with the 'dead man' control button; the special mechanical control design of the "Dead Man" button is necessary for vibration transmission. In addition to transmitting the required vibration, this button also works as an active button.

Application field

The vibrating handle can be used to control crane trucks when the crane operator is not in a position to visually supervise the hanging load movement; in this case, the different-frequency vibration conveys to the operator information regarding the load movement and speed when visual or acoustic alarms would not be equally effective.

Supply voltage (Vin)	8 - 32 Vdc				
Segnal output at rest	2,5 Vdc +/- 0,1 Vdc				
Full output signal range	0,5 - 4,5 Vdc, +/- 0,2 Vdc				
Rated output current	1 mA				
Current consumption at rest	15 - 25 mA				
Rotation angle	+/- 30°				
Operating temperature	-25 °C / +85 °C				
Ingress protection rating	IP 68 (above panel)				
Operation life	> 5.000.000 cycles				
Applied standards (EMC) - Immunity	EN 61000 - 4 - 2,3,6 / EN 14982				
Applied standards (EMC) - Emission	EN 61000 - 6 - 3

All the "T" type handle configurations can be equipped with a "DEAD MAN" type control on the rear side; to order this option, add the suffix DM to any rear side set-up codes.

The available configurations with the 'dead man' device are listed here below:

00RDM - 01RDM - 02RDM - 03RDM - 10RDM - 11RDM

HANDLE POSITION "T" (respect to the body)					
Code	Description	Configuration			
1L	handle position 1 bent lever left	<u>1L</u> 1S 1R			
15	handle position 1 straight lever (standard)				
1R	handle position 1 bent lever right				
2L	handle position 2 bent lever left	<u>2L</u> 2S 2R			
25	handle position 2 straight lever (standard)				
2R	handle position 2 bent lever right				
3L	handle position 3 bent lever left	<u>3L</u> 3S 3R			
35	handle position 3 straight lever (standard)				
3R	handle position 3 bent lever right				
4L	handle position 4 bent lever left	4L 4S 4R			
45	handle position 4 straight lever (standard)				
4R	handle position 4 bent lever right				

Optional

The "T" type handle can be set-up according to countless combinations of optional components: special push-buttons, special rollers and Mini trim switches; for more informations contact our Commercial Dept.

PUSH BUTTONS				
Profiles buttons available	low - high			
Available colours	red, black, yellow, green, white, blu			
Buttons function	momentary N.A stable ON/OFF			
Ingress protection rating	IP64 - IP68 (on request)			
Options	Red LED built			

LED		
Led dimension	Diameter 5	
Supply voltage	2 V	
Available colours	red, green	

FPR TWCH (ROLLER)			
Supply voltage (Vin)	8 - 32 Vdc		
Segnal output at rest	2,5 Vdc +/- 0,1 Vdc		
Full output signal range	0,5 - 4,5 Vdc, +/- 0,2 Vdc		
Rated output current	1 mA		
Current consumption at rest	15 - 25 mA		
FPR PWM (ROLLER PWM)			
Supply voltage (Vin)	8 - 32 Vdc		
Max current consumption (no load applied)	100 mA		
PWM output	100 - 1400 mA @ 12 Vdc		
PWM dithering frequency	100 Hz		

The "T" type handle can be equipped with MINI TRIM 4-way switches for 2 additional axis control.

MINI TRIM 4 WAY			
Rated amperage (load resistive)	2 A		
Rated amperage (load inductive)	1 A		
Operation life	100.000 cycles 1A inductive @ 28 Vdc		
Stroke	15° (max)		
Ingress protection rating	IP64 - IP68S		
Operating temperature	-55°C to +85°C		
Lever pivot & Stop Strenght	6,8 kg		

GENERAL CONDITIONS AND PATENTS

Product identification

All Hydrocontrol products have an identifying plate placed in specific position.

Serial number:

it univocally identifies the physical valve: this provides an easy way to find all sales and product details.

Product code:

it is a number univocally identifying the configuration and pressure settings of a valve.

General

These general conditions are applicable to all the supplies which Hydrocontrol s.p.a. will carry out, on the base of purchasing orders forwarded from the Customer. Terms like EXW, DDP and so on are referred to the so called Incotems published by the International Chamber of Commerce, current at the date of conclusion of these General Conditions.

Purchasing orders management

Purchasing orders are binding for Hydrocontrol s.p.a. only if confirmed in writing with order confirmations. Hydrocontrol s.p.a. engages itself to supply goods up to the order confirmations. Any complaints regarding the content of the order confirmation must be notified in writing to Hydrocontrol s.p.a. by 5 days and no later the forwarding of the order confirmation. The Customer undertakes to pay the goods supplied by Hydrocontrol s.p.a., according to the prices listed on the order confirmation.

Payment conditions

The Parties agree upon the payment conditions at the beginning of the supply. In case of delay of payment, Hydrocontrol s.p.a. will have the right to request of moratory interests equal to the Euribor, increased by 2 points. In case of delay of payment, Hydrocontrol s.p.a. will have the right to not execute the eventual purchasing orders in progress, even if confirmed.

Delivery and shipment

The supply of the goods will always be Ex-Works, even in the case that Hydrocontrol s.p.a. had agreed with the Customer that Hydrocontrol s.p.a. takes care of the shipment, or part of it. In any case, the risks about perishment or damage of the goods will pass to the Customer, at latest, when the goods are delivered to the first carrier.

Characteristics of products

Hydrocontrol s.p.a. engages itself to supply good quality products, up to the technical specifications contained in technical schedules or in the catalogue. Hydrocontrol s.p.a. reserves the exclusive right to make any change to the products, which, without altering their essential features, appear to be necessary or suitable.

Complaints

The complaints regarding the apparent defects of the Products (such as, for instance, the packing, quantity, number or exterior features of the Products) must be notified in writing to Hydrocontrol s.p.a. by 7 days and no later upon the receipt of the goods. Failing such notification, the Customer's right to claim the above defects will be forfeited. The hidden defects (defects which cannot be discovered by the Customer on the basis of a careful inspection upon the receipt) shall be notified in writing to Hydrocontrol s.p.a. by 7 days and no later from the discovery of the defects, and in any case no later than 18 months from the delivery of the Goods. Failing such notification, the Customer's right to claim the above defects will be forfeited. It's agreed that, even in case of any complaint or objection, the Customer will not have the right to suspend or delay the payments due to Hydrocontrol s.p.a., as well as payment of any other supplies.

GENERAL CONDITIONS AND PATENTS

Warranty

In case of any defects, lack of quality or non-conformity of the supplied Products, Hydrocontrol s.p.a., at its exclusive choice, engages itself to replace or repair the defective Products provided such defects or non-conformity have been timely notified in writing to Hydrocontrol s.p.a., in accordance to point nr. 6, by 18 months from the delivery of the Goods and no later. Products repaired or replaces under warranty as above described are submitted to the same guarantee, for a period of 18 months from the date of repair or replacement. Except in case of fraud or gross negligence, in case of defects, lack of quality or non-conformity, Hydrocontrol S.p.a. undertakes only to repair or replace the defective Products, in accordance to what above described. This guarantee (i.e. the obligation of repairing or replacing the Products) is in lieu of any other legal guarantee or liability of the Supplier, with the exclusion of any other guarantee or liability – whether contractual or non-contractual – in connection with the Products supplied (i.e. compensation for damages, loss of profit, recall campaigns, ...). Hydrocontrol s.p.a. is covered by appropriate policy of Product Legal Liability.

Retention of title

The Goods supplied by Hydrocontrol s.p.a. remain property of Hydrocontrol s.p.a. until the complete payment of the supply is received.

Secrecy bond

Hydrocontrol s.p.a. engages itself to treat as highly confidential all the technical or commercial information should learnt from the Customer, which are not already of public divulgence.

Patents

Except preventive written authorization of Hydrocontrol s.p.a., the Customer cannot use the supplied Products, or part of them, or the descriptions or the drawings of them – whether registered patented or not – to project or make similar goods. Even in case of preventive written authorization of Hydrocontrol s.p.a., all the patents, labels and registered design, royalties and intellectual property rights related or in connection with Products supplied by Hydrocontrol s.p.a., are and remain property of Hydrocontrol s.p.a. The Customer undertakes to treat all of them as highly confidential.

Applicable law and jurisdiction

The supplies carried out by Hydrocontrol S.p.a. are governed by these present General Conditions and, for what here not expressly provided, by the Italian Law. The competent Law Courts of Bologna have the exclusive jurisdiction in any controversies regarding the supplies of Products by Hydrocontrol s.p.a., or from the supplies arising out or to the supplies connected, in which Hydrocontrol s.p.a. is part.
